

## FACILITATE TRUSTED QUALYSGUARD VULNERABILITY & COMPLIANCE SCANNING WITH CYBER-ARK'S PIM SUITE

### About Cyber-Ark

Cyber-Ark® Software is a global information security company that specializes in protecting and managing privileged users, applications and highly-sensitive information to improve compliance, productivity and protect organizations against insider threats. With its award-winning Privileged Identity Management (PIM) and Highly-Sensitive Information Management software, organizations can more effectively manage and govern application access while demonstrating returns on security investments. Cyber-Ark works with more than 700 global customers, including more than 35 percent of the Fortune 50. Headquartered in Newton, Mass., Cyber-Ark has offices and authorized partners in North America, Europe and Asia Pacific.

Using QualysGuard integration with Cyber-Ark's Privileged Identity Management (PIM) Suite, credentials management is simplified as customers no longer need to store and manage a copy of their passwords within QualysGuard when performing trusted scans. Instead, QualysGuard stores a pointer to the location of the credential information in the Cyber-Ark Enterprise Password Vault® of the PIM suite, and the QualysGuard Scanner Appliance requests the passwords when it performs the trusted scan - at scan time. Because passwords are centrally managed in Cyber-Ark's Enterprise Password Vault®, the organization can change passwords at will or use a Cyber-Ark policy to make these changes on a regular basis without having to worry about synchronizing these changes with QualysGuard.

### How it Works:

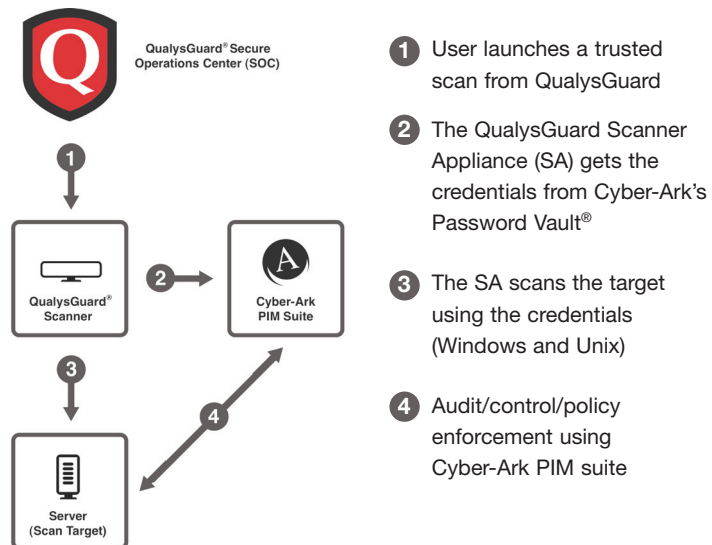

Figure 1: Workflow of the integration between QualysGuard and Cyber-Ark PIM Suite

### Benefits:

- **Simplify privileged credential management:** Customers can leverage their password policy embedded in Cyber-Ark's Enterprise Password Vault to perform vulnerability and compliance trusted scanning without the need of store credentials in QualysGuard.
- **Facilitate compliance scanning:** Manage and store all privileged credentials in one centralized place where Cyber-Ark enables full accountability and traceability of all privileged account activity to meet regulatory standards such as PCI, SOX, HIPAA.
- **Better vulnerability discovery and prioritization:** When a trusted scan is performed, QualysGuard scanner logs into the target machine and reads configuration data including registry values and configuration files on the file system, just like a regular user session could. QualysGuard uses the configuration data to verify whether or not certain vulnerabilities that require local access to the host exist; as well as the ability to collect compliance data from systems without the burden of deploying agents.

## Facilitate Trusted QualysGuard Vulnerability and Compliance Scans with Cyber-ark's PIM Suite
